

NOT ALL BUSHINGS ARE THE SAME

Since Quality Is Everything, Why Not Specify The Best.

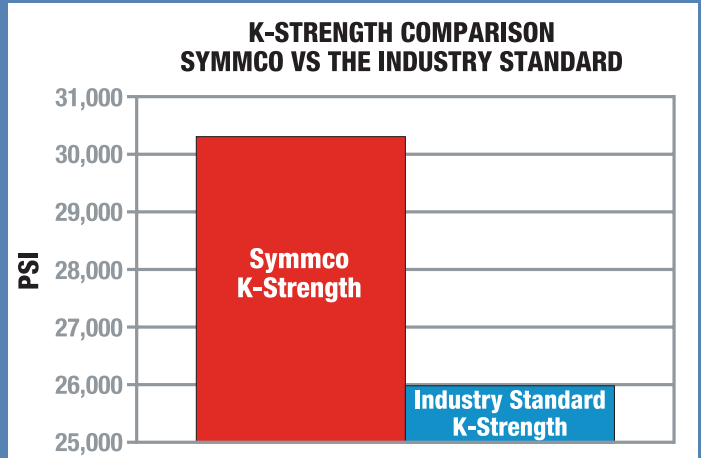

Symmco ensures our customers that all of our bearings are consistently manufactured and that material consistency will be maintained throughout the life of our product. We are diligent in preserving the integrity of the materials and processes in the formulation of our bearings, giving our customers precisely the materials requested for the exact application needed.

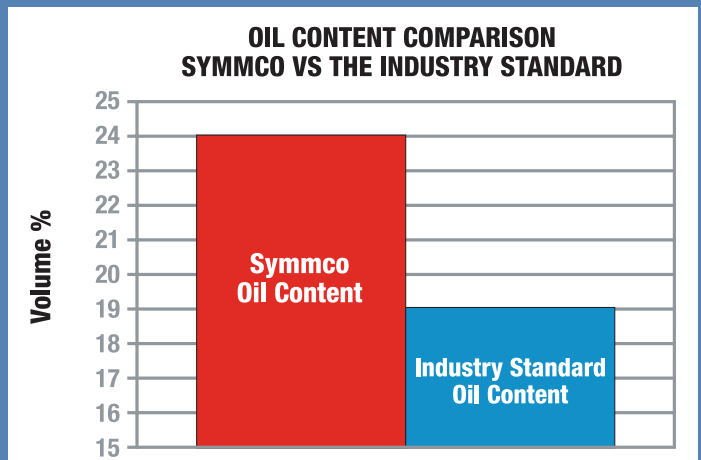

To exemplify the status and reputation of Symmco quality, the MPIF (Metal Powder Industries Federation) has used our bearings in their testing to establish bearing standards and have modeled their "High Strength" bearing standards based on results from testing of our "Standard" bearings.

Symmco Sintered Bushings Exceed The Standards

Symmco continually performs testing on our bronze bushings for K strength, density and oil content. The results of the testing can be seen in the graphs below...

*Industry standard is 26,000.
Symmco maintains value over 30,000.

*Industry standard is 19% porosity.
Symmco maintains 24% porosity.

The Symmco Advantage: Performance You Can Count On

- Better lubricity
- Longer bearing life – less "downtime"
- Stronger bearings – more thrust load
- Cooler running bearings
- Lower level of drive force
- Lot-to-lot consistency in quality

**Symmco bearings operate at a more consistent,
lower temperature than the competition.**

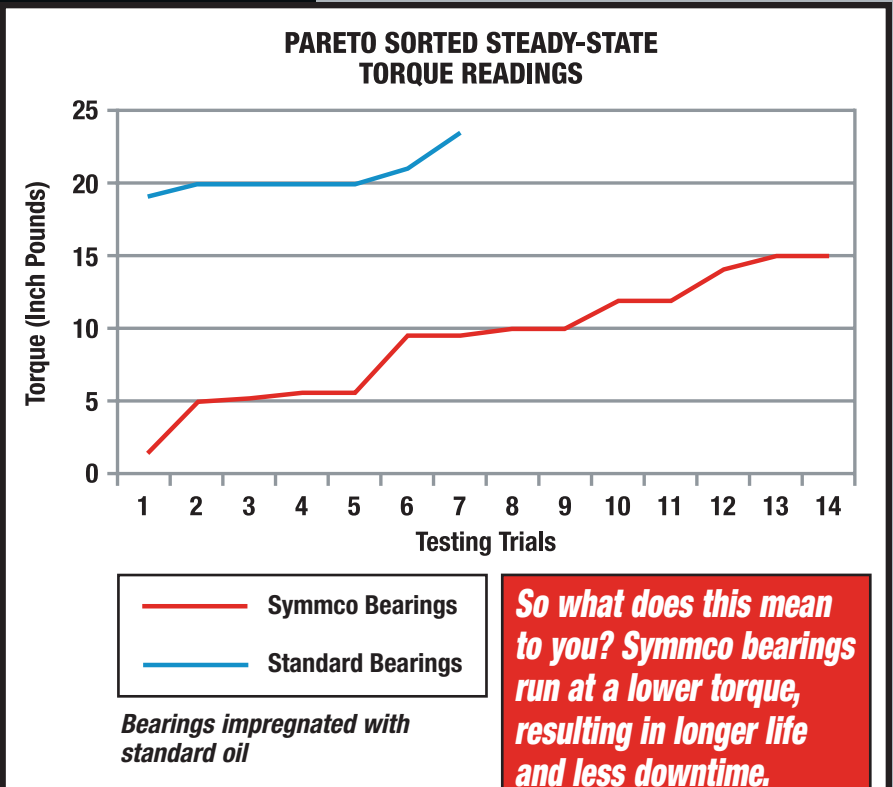

*Industry standard based on MPIF Std 35 CT-1000-K26 Sintered Bronze.

SYMMICO
INCORPORATED

Your Key To Quality & Savings

Symmco Offers Much More Than The Highest Production Standards:

- 1,500 standard parts in inventory (sleeve bearings, flange bearings, thrust washers, bar stock & plate stock)
- 24-hour delivery
- Tooling available to make over 1,000 "non-standard" bearings
- Broad range of material offerings
- Special lubricants/oils
- Metric sizes available
- Superior technical support and customer service
- Engineered component products made to customer specifications
- Custom engineered bearing solutions

Symmco has been in the powder metal business since 1952 supplying world markets with quality bearings and bushings. We maintain operating conditions and quality control so that batch to batch, year after year, we guarantee our bearings will be consistent. *Let us serve you.*
