# Miscibility Tables

## Miscibility of Base Oils

Mineral Oil	+	+	+	-	-	±	-
Synthetic Hydrocarbon Oil	+	+	+	-	-	-	-

PFPE Oil	-	-	-	-	-	-	+

+ miscible - not miscible ± partially miscible

Before mixing different lubricants both substances should be checked for compatibility to prevent potential problems.

**IMPORTANT:** Different types of thickeners or base oils may not prove miscible with one another. When mixed, the resulting substance may not be fully homogeneous (two separate phases may result). The grease "mixture" may no longer maintain its original characteristics becoming extremely unreliable in service.

The following tables provide an overview regarding miscibility of thickeners and base oils. For this purpose, mixing ratios of 50:50 are assumed.

Note: Since additives may also have undesirable effects when mixed, we recommend consulting the manufacturer of the particular lubricating grease prior to use.
